PROFESSIONAL SUMMARY

Software Developer and final-year Computer Science student with hands-on experience building full-stack web applications and REST APIs using Java, Spring Boot, React, and Python. Proven ability to design scalable backend systems with MVC architecture, integrate cloud databases (MongoDB Atlas, Firebase), and manage state in modern React applications using Zustand and Redux Toolkit. Currently contributing to a production SaaS product at UV Netware. Passionate about clean code, practical machine learning applications, and building software that solves real problems.

EXPERIENCE

Software Developer Intern — UV Netware Pvt. Ltd., Remote | Feb 2026 – Present

- Building a **SaaS** web application using **React 19**, **Vite**, **Tailwind CSS**, and **Firebase**, contributing to a production codebase from day one.
- Integrated **Firebase Authentication** with complete sign-in, sign-up, and sign-out flows, including protected routing for authenticated users.
- Architected frontend state management using **Zustand** for editor state and **Redux Toolkit** for global authentication state, improving predictability and reducing re-renders.

Python Intern — Techsim Plus Pvt. Ltd., Bhopal | June 2024 – August 2024

- Completed applied training in **Python** with a focus on **Data Science** and **Image Processing**, working with OpenCV, Pandas, and NumPy.
- Built image processing pipelines and explored data preprocessing techniques used in real-world ML workflows.

PROJECTS

Personal Journaling REST API (JournalApp) — Java, Spring Boot, MongoDB Atlas, Maven

- Designed and developed a backend REST API using **Java** and **Spring Boot** with full **CRUD** functionality for managing personal journal entries.
- Applied **MVC architecture** and a dedicated **Service Layer** to enforce clean separation of concerns, improving testability and long-term maintainability.
- Integrated **MongoDB Atlas** as the cloud database and **Maven** for dependency management; version-controlled on GitHub.

Heart Attack Prediction System — Python, Machine Learning, LLM Integration

- Built a **Decision Support System (DSS)** using supervised **Machine Learning** algorithms to classify cardiac arrest risk in real time from patient health data.
- Integrated a **Large Language Model (LLM)** to generate human-readable medical insights from quantitative predictions, improving clinical usability of the output.
- Preprocessed and analyzed medical datasets to engineer key health features, achieving high classification accuracy.

TECHNICAL SKILLS

Languages	Java, Python, C++, HTML, CSS
Frameworks & Libraries	Spring Boot, React 19, Tailwind CSS, Vite, Swing, OpenCV, Pandas, NumPy
Databases & Cloud	MongoDB Atlas, Firebase, Supabase
Tools & Platforms	Git, GitHub, Maven, VS Code, IntelliJ IDEA, Cloudflare (deployment)
Concepts	REST APIs, MVC Architecture, Data Structures & Algorithms, State Management (Zustand, Redux Toolkit)

EDUCATION

Bachelor of Engineering, Computer Science — Expected June 2026

Jai Narain College of Technology, Bhopal, M.P.

Higher Secondary (Class XII) — 2021

Christ Jyoti Sr. Sec. School, Satna
